## P2 - Queries

GSyC

December 2020

### 1. Requirements

In this practice you must create sql queries to retrieve the requested information.

- Get the name of the institutions that have never been updated.
- Get the name of the employees that work in the study that used the collection with idCollection = 1.
- Get the information of the employees that were not working in a study on 2018-01-16.
- Get the information of the employees that have never worked in a research study.
- Get the information of the employees that are currently working at institution with idInstitution = 1.
- Get the name of the research studies in which the employee with DNI 54569875T has worked in the past.
- Get the DNI, Name of the employee and name of the institution of those employees that are currently working in an institution.
- Get the names of the collections that were used in the studies that have been publicated.
- Count the number of samples in each collection.
- Get the name of the institution and the id of the samples of those samples that are being stored.
- **Be creative:** Show me the most complex query you can make. Longer queries are not necessarily complex.

### 2. Entrega

You must deliver a .txt file with all the queries in it byl **Friday, 8th January at 23:59** through the corresponding task atl Aula Virtual.
